Subject: BPRG 3-D run question
Importance: High

Out of the Hunters Point radionuclides below, which were run using the PRG output option 1 and which did you use PRG output option 2 with the half lives of the progeny changed to match the parent. Were all of these run with residential and indoor worker land use. We have a set of revised surface factors but I just want to confirm which land uses and output option runs Fred should be applying the surface factors to post-processing

Help me with the big picture here.

You're asking ORNL to run BPRG using default parameters except those listed in his Wednesday, June 24, 2020 10:42 AM email? yes

The biggest change is the assumption that the floor and lower 6' of wall are contaminated, rather than all 6 interior surfaces? Yes, for the BPRG run.

What is a surface factor? The external slope factors assume the individual is on a contaminated flat plane that extends in all directions. The surface factor is to model the radiation field that results from not just the floor being contaminated but also the walls and/or ceiling. It's a concept we took from RESRAD BUILD when developing the BPRG calculator. We have done a lot of work in the various calculators through the years to come up with adjustment factors for the external slope factors to better mimic radiation fields, see attached 2011 and 2016 presentations that summarize this work.

Caleigh,

Hunter's Point has requested some MCNP runs to facilitate their site assessment. In particular they are interested in surface factors that are generated for the BPRG calculator. These requests are really an advanced release of the work you are already doing. In other words, these requested advance results should duplicate the final results. A detailed write-up isn't required. Hopefully you can build on the submission you did for them last year. I suggest forgoing the raw kerma and energy factors and just present the final surface factors.

Here is the scenario:

- Receptor position - Center of room first, other receptor locations as time permits or all at once if multiple tally points can be done simultaneously.
- Material of floor - Concrete
- Material of wall - Concrete
- Material of celling - Concrete
- Source thickness on floor - Ground plane
- Source thickness on wall - Ground plane, but only going up 6 feet of the wall from the floor
- Source thickness on ceiling - None
- Room size - 3.05 x 3.05 x 3.05 meters or 10x10x10 ft.

Here are the parent isotopes of interest:

- Am-241
- Co-60
- Cs-137
- Eu-152
- Eu-154
- H-3
- Pu-239
- Ra-226
- Sr-90
- Th-232
- U-235

Surface factors will be required for each progeny as well.

Please let me know when you can start and how long this effort will take. It's okay to release results parent by parent and a final summarization at the end.

Thank You,

fred d.

OK, Will need:

- Isotope(s)
- Receptor position Center of room first, other receptor locations as time permits
- Material of floor Concrete
- Material of wall Concrete
- Material of celling Concrete
- Source thickness on floor Ground plane
- Source thickness on wall Ground plane, but only going up 6 feet of the wall from the floor
- Source thickness on ceiling None
- Room size

Subject: [EXTERNAL] RE: old Hunter's Point runs

They never used Caleigh's report. I had sent it to them. I was hearing the Navy and state were going to push a floor only scenario which is what we asked Caleigh to run. This was later changed to a floor and 6 feet up each wall. I was waiting to see if they could figure out how to adapt RESRAD to adequately account for it using a volume slope factor for ground plane fixed contamination and dust while they use ground plane dose conversion factors for the same situation for dose assessment. ACE and Navy were unable to get an adequate explanation from ANL.

Stuart,

LMK when they tell you what they want differently. Also, I look more closely at the report Caleigh did and the very last tables are room ratios, but they are by energy. I'm not sure how the folks at Hunter's Point used those ratios. They would be pointless to me.
